AMENDMENTS TO THE ABSTRACT

Amend the Abstract as follows:

A rewinding machine is described ~~comprising~~  
including: a path for feeding the web material towards a  
winding system; interruption members to interrupt the web  
material at the end of winding of a log; a core insertion  
channel, defined by a rolling surface and a movable member;  
a core feeder to insert winding cores in succession in ~~said~~  
the channel; an electrostatic device positioned along ~~said~~  
the channel to electrostatically charge the winding cores  
and/or the web material thus causing, due to the  
electrostatic charges, reciprocal adhesion of the core and  
initial free edge of the web material obtained by  
interruption of the material at the end of winding of each  
log.
